

FOR IMMEDIATE RELEASE

AirOcare Signs Licensing Agreement With Ingersoll Rand

AirOcare provides Ingersoll Rand with global rights across the perishable product cold chain to manufacture, market, install and service AirOcare equipment

Rockville, MD – September 17, 2007 – AirOcare announced today that it has signed a licensing agreement granting Ingersoll Rand (IR) the global right to manufacture, market, sell, install and service AirOcare equipment across the perishable product cold chain. As part of this agreement, AirOcare's employees and other resources dedicated to the selling and servicing of AirOcare equipment in these market segments will transition over and become Ingersoll Rand resources.

AirOcare's patented air purification technology is highly effective in killing molds, bacteria and viruses in the air and on the surfaces of any enclosed space (such as containers, trailers, cold storage rooms, processing areas, and display cases); reducing ethylene levels; extending the shelf life of perishable products; and eliminating odors. The combination of AirOcare's technology with the depth and breadth of Ingersoll Rands' resources and market presence will enable IR to meet the needs of global customers across the perishable product cold chain for higher quality and safer products and cleaner operating environments. The AirOcare technology is highly complementary with the existing products and

services offered to Ingersoll Rand's customers through its Hussman and Thermo King brands and broadens the business benefits that IR can deliver to its customers.

AirOcare and Ingersoll Rand will work together to insure the seamless transition of the business covered by the license agreement. In addition, AirOcare will continue to operate as an independent business entity, focusing its efforts on meeting the air quality and safety needs of customers outside the markets covered by this agreement, including the HVAC, healthcare, government and other such markets.

Ingersoll Rand is a well known, respected and diversified industrial company. Through its Climate Control Technologies sector, which includes the market-leading brands of Hussmann[®] and Thermo King[®], Ingersoll Rand provides solutions globally throughout the perishable cold chain industry. This agreement means that AirOcare will now have one of the largest and most reputable industrial equipment manufacturing and engineering firms positioned to meet the accelerated market demand for AirOcare's air purification technology across the multi-billion dollar perishable cold chain market.

About AirOcare

AirOcare is a leading environmental technology company dedicated to promoting the health, safety and well-being of people. AirOcare's unique and patented technology continuously destroys molds, bacteria and viruses from the air and on surfaces. This method of sanitization has been widely recognized as the ideal solution to ensure a cleaner and safer environment.

Operating 24/7, AirOcare cleans and sanitizes the facility in which it is installed, ensuring a continuously protected environment and the highest standard of care. The effectiveness of the AirOcare technology has been validated by customers, independent labs and scientific experts in a diversity of applications. AirOcare has invested millions of dollars in scientific research and testing in order to develop a technology that provides the most effective and safest solution for operating risks involving air and food safety, infectious disease control, odor removal and environmental health hazards.

In the fresh food cold chain, AirOcare units are used from farm to fork, reducing product shrink, creating a safer operating environment, and improving the quality and shelf life of fresh and processed fruits, vegetables, flowers, meats, and seafood. The benefits of the equipment are well documented, with validation by the USDA, independent labs and major users.
